WORKSHEET TWO

AN AIR POLLUTION SOLUTION

Air pollution is when harmful gases, smoke, or dust get into the air and make it dirty. Air pollution can come from things like factories, fires, and vehicles that run on diesel or petrol. In this episode, we learned that transport is one of the biggest sources of air pollution in Ireland. Breathing in polluted air is harmful to people's health and to the health of the environment.

We need an air pollution solution!

Can you come up with an innovative way to remove transport-related pollution from the air?

For example:

- Cork City has installed air-purifying robotic trees designed to filter out pollutants in the city centre where there are lots of cars and buses that run on petrol and diesel!
